# Electrifying Transportation:

Reduce Costs and Emissions with E-Bikes and Electric Cars

**2:00 PM—Test Rides \* 3:00 PM Panel Discussion**

Did you know that the typical cost to charge an electric vehicle is equivalent to paying \$1.50 per gallon at the pump? And, with fewer moving parts, electric vehicles can save up to \$1,500 annually in maintenance costs?

Join the RAMP Energy and Transportation Task Forces for a workshop and jamboree to celebrate electric cars and e-bikes. E-bikes (weather permitting) and electric cars will be onsite for rides, and you can hear from owners directly about their experiences. There will also be an overview of new electric vehicle and electric bike incentives.
